	Load operator	Update operator	Stream operator	Inserter operator	Export operator	Selector operator	ODBC operator	Data Connector operator	DDL operator	OS Command operator	FastLoad INMOD Adapter operator	MultiLoad INMOD Adapter operator	FastExport OUTMOD Adapter operator	Schema Mapping operator
High speed inserts	●													
High speed updates and deletes		●												
High speed export					●									
Load into an empty table	●	●	●	●										
Load into populated table		●	●	●										
How many tables can it load in one execution?	1	up to 5	up to 127	1										
Lock the table during loading	●	●												
Use a Load slot	● FastLoad protocol	● MultiLoad protcol			● FastExport protocol									
Data availability	At end of the job	At end of the job	Near real-time	At end of the job										
Mini-Batch Loading	●								●					
Continuous Loading			●											
Load LOB data				●										
Export LOB data						●								
Export data from Teradata tables					●	●								
Export data from ODBC-compliant databases							●							
Export data in report mode						●								
Read data from flat files								●						
Write data to a flat file								●					●	
Read data in delimited format								●						
Write data in delimited format								●						
Interface with Access Modules								●					●	
Support Insert statement	●	●	●	●										
Support Update statement		●	●											
Support Delete statement		●	●											
Support Upsert statement		●	●											
Support Merge statement			●											
Support Select statement					●	●	●							
Support DDL/DCL statement									●					
Interface with FastLoad inmods											●			
Interface with MultiLoad/TPump inmods												●		
Interface with FastExport outmods													●	
Send commands to the OS										●				
Verify schema definition against input data														●
